

How to Set Up Guided Access on iOS for Logmaster Users

15/11/2024 3:04 pm AEDT

Privacy and focus are crucial for users of Logmaster, an Electronic Work Diary for NHVR and WAHVA regulated Heavy Vehicle drivers. Guided Access helps you stay focused on a single app by temporarily restricting your device to that app. Here's how to set it up on your iOS device:

Step-by-Step Guide

1. Open Settings

- Locate and tap the **Settings** app on your home screen.

2. Go to Accessibility

- Scroll down and tap on **Accessibility**.

3. Enable Guided Access

- Under the **General** section, find and tap **Guided Access**.
- Toggle the switch to enable **Guided Access**.

4. Set a Passcode

- Tap **Passcode Settings**.
- Choose **Set Guided Access Passcode**.
- Enter a passcode that you will remember but is hard for others to guess. This passcode is used to end the Guided Access session.

5. Optional: Enable Face ID or Touch ID

- You can enable **Face ID** or **Touch ID** as an alternative to entering your passcode.
- Toggle the switch next to **Face ID** or **Touch ID**.

6. Start a Guided Access Session

- Open the **Logmaster** app.
- Quickly press the **Home button** three times (or the **Side button** on devices without a Home button).
- Adjust any settings for the session by tapping **Options** in the bottom left corner and selecting your preferences.
- Tap **Start** in the top right corner to begin the session.

7. End a Guided Access Session

- To end the session, triple-click the **Home button** (or **Side button**).
- Enter your Guided Access passcode.
- Tap **End** in the top left corner.

By following these steps, you can ensure that Logmaster remains the only accessible app during your work sessions, helping maintain privacy and focus.
